(57) **ABSTRACT**

A cover for a recessed light fixture includes a base plate mounted on a surface such that an outer perimeter of the base plate surrounds the recessed light fixture. A lens frame is removably secured to the base plate. The lens frame includes a recess that receives an onyx lens that is sized and shaped to fit within the recess. The onyx lens is secured between a lens border of the lens frame and the outer perimeter of the base plate so that the onyx lens is positioned over the recessed light fixture. Light from a lamp within the recessed light fixture passes through the onyx lens and is emitted from a polished surface of the onyx lens to provide a pleasing decorative glow for illuminating a step or other passageway.
